

# GLOSS LONG-TERM CARE

ZU LOUDSPEAKER GLOSS CLEARCOAT FINISH LONG-TERM CARE [REV-C]

Our gloss finished loudspeakers feature top quality automotive-type polyurethane clearcoats. The resulting finish is both gorgeous and very durable, requiring no special care or maintenance. Nevertheless, here are a few tips on routine dusting and optional polishing.

## **CLEANING & DUSTING WATER**

Tap water in a spritz bottle works great for dusting and removing light fingerprints. Using a dry clean microfiber towel, simply mist and promptly wipe. A second pass might be needed if your loudspeakers have been fondled by greasy fingers. Water is a gentle cleaner, has nice short-term anti-static properties, leaves no residue, is always just a few steps away, and all but free.

## **CLEANING & DUSTING MEGUIAR'S® M34 MIRROR GLAZE® FINAL INSPECTION**

Meguiar's M34 Final Inspection is what we use for final detail at Zu. It leaves no residue, contains zero gloss enhancers, and is 100% paint shop safe. We find that it produces better and quicker results than water or window cleaners, and the anti-static properties last longer. To use just mist and wipe, working one side of the loudspeaker at a time. Meguiar's M34 Final Inspection also works great on computer screens, preamps, amps, phones, et cetera.

## **CLEANING, DUSTING & POLISH ZU CLEAN-N-SHINE™**

Zu Clean-N-Shine leaves the surface super smooth and shiny without streaks or oily feel. It contains a highly reflective synthetic shining agent and is designed for modern automotive clearcoats. This product is a gentle cleaner, a gloss enhancer, anti-static solution, and forms a tough ultra-thin protective barrier. To use simply mist the loudspeaker, avoiding the drivers and other bits, let stand for half a minute and wipe off with a clean microfiber cloth. Great for all painted surfaces, metal, chrome, glass and audio electronics. Zu Clean-N-Shine is wax and silicone free.

## **POLISH & SEAL MEGUIAR'S® M21 MIRROR GLAZE® SYNTHETIC SEALANT 2.0**

There is no need to wax Zu gloss loudspeakers, not that it will harm anything, its just that they really don't need it. The clearcoats used by us are the best out and provide exceptional levels of gloss, unparalleled protection from the UV rays, and exceptional harness to resist scuffing. Meguiar's M21 Synthetic Sealant however is not a wax and will improve shine and add a bit of scuff protection. The M21 sealant does take more work than a mist and wipe product like Zu Clean-N-Shine, but nothing like traditional wax. If you apply M21 and then just use water, Final Inspect or Zu Clean-N-Shine for routine cleaning and dusting you will find one application of sealer will last several years. Also worth mentioning, Clean-N-Shine will bond to and not strip the M21 sealant from the clearcoat and the two together produce an amazing silky smooth and dry shine. Clean with water or M34 Final Inspect before polishing and sealing with M21.
