ZU AUDIO IBIS JUMPER Mk.I [REV-A] LOUDSPEAKER JUMPERS SPECIFICATIONS + INFORMATION

Ibis Jumpers are designed to replace the brass jumper straps common to most all dual input loudspeaker binding posts (2 red posts, 2 black posts per loudspeaker). The brass jumpers are there so that you can run single wire input, or remove them and run bi-wire input cables. Those using standard single wire inputs will benefit from replacing the basic brass jumpers with the high conductance Ibis Jumpers.

Ibis Jumpers are as good as it gets for replacing those less than hi-fi brass straps on bi-wireable speakers. Termination is not solder but an extreme pressure crimp (cold forged to the conductor). Loudspeakers with jumpers are designed, or at least marketed, as being able to benefit from being “bi-wired” which is to run two cables from the amp to the speakers; one connecting the lower binding post and another connecting the higher. In our experience it is generally better for the same investment to use just one cable of a higher quality than two lesser, using the Zu Ibis jumpers to connect the input terminals in place of the stock brass straps.

INSTALLATION NOTES

Switch your power amp off prior to disconnecting or connecting your loudspeaker cables.

Now, wash your hands with soap prior to handling any cable with bare metal—you don’t want to push halides and other subtle tone robbers into the amplifier, cable or loudspeaker connectors. If you do touch the exposed contacts you might want to buff them with a clean cotton rag. Keeping the contacts free of contaminants ensures a long-term and trouble-free connection.

To clean plated connectors, shiny bright gold or silver colored ones, just use rubbing alcohol on a cotton cloth and some cotton swabs to get into the tight parts. If the connector being cleaned is bare copper or silver we recommend cleaning them with our favorite polish, Cape Cod™.

Anytime you are making an electrical connection make it a habit to inspect the contacts and clean them if they are tarnished or dirty. Our bare copper spade lugs may need to be cleaned every year, depending on how clean they are when connected and your environment. Most any copper polish will work for this though we have found Cape Cod™ to be excellent. Brasso™ is also good. Acid based cleaners are tricky, if you don’t have experience cleaning copper with acid we wouldn’t recommend that you start with your audio gear. Most of the time your terminals are going to be in good condition and just need a little buffing and for that you can use a bit of alcohol and a cotton cloth.

BURN-IN

Zu Ibis Jumpers will require a good bit of play before they are fully burned in, roughly 400 hours—the use of Teflon® equals slow burn-in. We do not recommend any burn-in devices or special recordings. We do recommend music you enjoy, preferably upbeat full spectrum recordings: rock, roots, full orchestra, big band.... For the possible how and whys about burn-in please see our Answers section within www.ZuAudio.com.

IBIS JUMPER MAINTENANCE

No maintenance is required for the wire or the connectors save for the annual copper spade cleaning. If your connector contacts are nice and bright, don't worry about it. However, anytime you are making an electrical connection make it a habit to inspect the contacts and clean them if they are tarnished or dirty.

TERMINATION OPTIONS

- Standard spade: 1/4" (6.3 mm) inside diameter [outside fork width = 7/16" (11 mm)].
- Oversized spade: 5/16" (8 mm) inside diameter [outside fork width 5/8" (15.9 mm)].
- Banana plug: (ITT-Pomona) fits common banana socket 5/32" - 3/16" (4.0 - 4.7 mm).
- Bare wire.

IBIS JUMPER SPECIFICATIONS

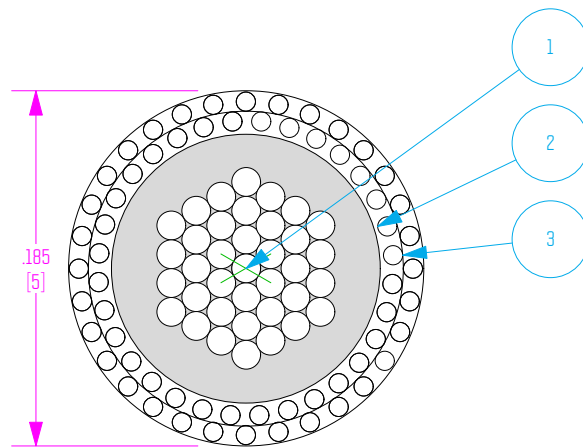

ZU AUDIO IBIS JUMPER Mk.I [REV-A] LOUDSPEAKER JUMPERS SPECIFICATIONS + INFORMATION

Design	Zu Ibis Jumpers replace the brass jumper straps common to most all dual input loudspeaker binding posts (2 red posts, 2 black posts per loudspeaker). The brass jumpers are there so that you can run single wire input, or remove them and run bi-wire input cables.
Production	2002–current (no changes)
Device Under Test	Zu Ibis Jumpers Mk.I [Rev-A] 8" [20cm]
Wire Manufactured By	Standard Wire / Mil. Div.
Harness By	Zu Audio
Termination By	Zu Audio
Manufacturers Country Of Origin	U.S.A.
Metallurgy	pure copper & silver (heavy plate)
Cable Geometry	jumpers
Wire Geometry	perfect lay
Directional Shielding	yes, install so markings reads in the direction of flow, amp > speaker geometric
Conducting Area	≈ AWG #10 [5.26 mm ²]
Max Voltage	600V
Wire Diameter	0.185" [4.7mm]
Dielectric	PTFE/air/Dacron
Wire Sheath	Dacron monofilament braid
Bend Radius	0.5" [13mm]
Tolerance	0.1%
RoHS	compliant
Life Expectancy	100 years+
Warranty & Service	limited lifetime, does not cover misuse or abuse

IBIS JUMPER SPECIFICATIONS

1. ≈ AWG #10 [5.26 mm²] heavy silver plated copper perfect lay [x2]
2. Teflon® PTFE virgin white insulator >600V [x2]
3. Braided monofilament Dacron sheath.

IBIS JUMPER WARRANTY

ZU AUDIO IBIS JUMPER Mk.I [REV-A] LOUDSPEAKER JUMPERS SPECIFICATIONS + INFORMATION

WARRANTY

Zu products are designed and manufactured to the highest quality. However, if something does go wrong Zu will fix or replace the product free of charge. Zu Ibis Jumpers have a limited lifetime warranty applicable to the original owner. If under normal home use you have any problems with this cable we will fix or replace the product.

While every effort is made to ensure a perfect finish that will last a lifetime, this warranty does not cover damage from impact, abrasion or UV exposure. Zu products are designed to be used in temperature and humidity controlled environments, namely your home, studio or office unless otherwise stated.

If in the highly unlikely event that a Zu product arrives to you dead on arrival (D.O.A.), and after discussing it with a Zu tech, we will ship another of the same product at our expense and arrange for the D.O.A. product to be collected. If after inspection we find that you have misrepresented a returned product's condition, and that it was improperly handled or used, Zu will charge you for all damaged parts, labor, shipping and handling of the product.

Warranty does not apply to damage caused by operating the product outside the intended use, accident, damage caused by another product, misuse, abuse, flood, fire, earthquake or any other external causes. Warranty does not cover damage caused by modification or service performed by anyone other than a Zu representative.

When a product or part is exchanged the replacement becomes your property and the suspect or damaged part becomes Zu's property.

WHAT YOU CAN EXPECT IF WARRANTY SERVICE IS NEEDED

If warranty becomes necessary, you must call or e-mail for a return of material authorization (R.M.A.) number. This provides opportunity to assist in diagnosing the problem and helps us to schedule for rapid turnaround in the event that parts, service or repair is needed. Upon factory inspection of parts or product, warranty eligibility will be determined. While service options, parts availability and response times will vary, we do our best to keep you happy. International customers should know that Zu will comply with all applicable export/import laws and regulations, you may be responsible for custom duties, taxes, broker fees, freight, and other charges. When shipping of product or part is required, repackage the complete product, or part, in its original packaging. If you have any questions about packaging please call or e-mail. Product damage caused from incorrect repackaging is not eligible for refund or warranty and the freight company may also reject your insurance claim. Until we have the product back in the shop and sign-off that it is eligible, the product is still your property, we recommend you insure or declare the full value when shipping. We also recommend that you only ship with a freight company that has a good reputation and offers tracking and insurance for the full amount.
